SUBJECT INDEX

to Volume 134, May–August 1993

Abnormal abdomen syndrome, molecular through ecological genetics, *Drosophila mercatorum*, 475
Aging, life span and life history, absence of strong heterosis, *Caenorhabditis elegans*, 465
Alcohol dehydrogenases, allozyme cline, *Drosophila melanogaster*, east coast of North America, 869
Alfalfa, regulation of *syrM* and *nodD3*, *Rhizobium meliloti*, 435
Allele
  antimutator, mutational specificity, *Escherichia coli dnaE*, 1031
  substitution processes, molecular evolution, 971
  VNTR, frequency distributions, stepwise mutation model, 983
Amylase, gene expression, glucose repression, *Drosophila melanogaster*, 507
Antennapedia complex, structural changes, *Drosophila pseudoobscura*, 319
Apis mellifera, 1195
Arabidopsis thaliana, maize element *Ds*, transposition pattern, 1221
Aspergillus nidulans, 361, 445, 1085
Auerbach, Charlotte, discovery of mustard gas mutagenesis, 393
Autotetraploid, populations, genetic variation, random drift, 649

Bacillus subtilis, 401
Bacteria-host interactions, integrated linkage map, common bean, 341
Bacteriophages
  λ and P22, double-strand break-stimulated recombination, 1013
  ϕX174, cold-sensitive external scaffolding protein, second-site suppressors, 1003
Barley, comparative diversity analysis of RFLPs and isozymes, within and among populations, 909
Bean, common, integrated linkage map, host-bacteria interactions, 341
Bithorax complex, 3′ regulatory region, reiterated and interchangeable regulatory elements, *Abdominal-B* gene, 809

Caenorhabditis elegans, 199, 211, 455, 465, 749, 769, 1097, 1105
Candida albicans, gene mapping, isogenic strain construction, 717
Catalase, rescue of acatalasemic mutants, *Drosophila melanogaster*, 781
Cell cycle
  arrest of *cdc* mutants, specificity of *RAD9* checkpoint, yeast, 63
  mutation in *bimD* gene, sensitivity to DNA damaging agents, *Aspergillus nidulans*, 1085
Central nervous system, *Caenorhabditis elegans unc-31* gene, 455
Checkpoint, *RAD9*, cell cycle arrest of *cdc* mutants, yeast, 63
Chlamydomonas reinhardtii, 737
Chromatin
  male germ line-specific transcripts, autosomal and *Y*-linked genes, *Drosophila melanogaster*, 293
  mutation in *bimD* gene, sensitivity to DNA damaging agents, *Aspergillus nidulans*, 1085
Chromosome
  Ac-induced instability, *Xanthophyllic* locus, tomato, 931
  artificial, compositional heterogeneity and patterns, evolution of *Drosophila* genome, 837
  cytogenetic analysis of region 31, *Drosophila melanogaster*, 221
  genetic analysis, achiasmatic segregation, *Drosophila melanogaster*, 825
  genetic linkage map, sugarcane, 1249
  inversions, *Adh* and *P6* gene variation, African population of *Drosophila melanogaster*, 789
  mapping of rearrangement breakpoints, fluorescent *in situ* hybridization, *Caenorhabditis elegans*, 211
  meiotic pairing, two types of sites, *Caenorhabditis elegans*, 749
  pairing regulator gene *Ph1*, fine physical mapping, polyploid wheat, 1231
  pericentric inversions, fertility effects, *Drosophila melanogaster*, 487
  physical mapping of meiotic crossover events, *Neurospora crassa* linkage group I, 1077
  rearrangements, transformation of *Neurospora crassa*, 729
  segments displaying QTL activity, multi-marker model, 1277
  six smallest, physical maps and resolution of 2.6 kilobase pairs, yeast, 81
Chromosome 2, mapping of simple repeated DNA sequences, heterochromatin, *Drosophila melanogaster*, 1149
Chromosome *X*, *male-specific lethal-one* gene, males, *Drosophila melanogaster*, 545
Chromosome *Y*
  autosomal and *Y*-linked genes, male germ line-specific transcripts, *Drosophila melanogaster*, 293
  Drosophila arizonae, restoration of normal spermatogenesis, *D. mojavensis*, 309
  mapping of simple repeated DNA sequences, heterochromatin, *Drosophila melanogaster*, 1149
  neo-, duplication, *Drosophila miranda*, 497
  subclass of *HeT-A*-related repeats, *Drosophila mela-*

nogaster, 531
Cladistic theory
intraspecific phylogeny reconstruction, empirical tests, predictions from coalescent theory, 959
phenotypic associations with haplotypes, restriction endonuclease mapping, recombination, 659
Clathrin, heavy chain gene, *Drosophila melanogaster*, 1119
Cline, allozyme, alcohol dehydrogenase, *Drosophila melanogaster* on east coast of North America, 869
Cloning, direct, yeast genes from and ordered set of lambda clones, recombination, 151
Coalescent theory, empirical tests of predictions, applications, intraspecific phylogeny reconstruction, 959
Codon, usage bias and base composition, nuclear genes, *Drosophila*, 847
Complements, dating the primigenial *C4-CYP21* duplication, primates, 331
Computer simulation, stepwise mutation model, VNTR allele frequency distributions, 983
Conidia, estimation of mitotic stability, 361
Cytochrome P450c21, dating the primigenial *C4-CYP21* duplication, primates, 331
Cytogenetics, analysis of chromosomal region 31, *Drosophila melanogaster*, 221
Cytoplasm, C terminus of *SEC63*, extragenic suppressors of mutations, five genes in yeast, 159

Dauer formation, parallel processing of sensory information, *Caenorhabditis elegans*, 1105
Deletions, genetic and molecular characterization, spermatogenesis defective gene *spe-17*, 769
Development, genetic control, Morgan's hypothesis, 671
Disequilibrium, class of population genetic questions, generalized occupancy problem, 953
DNA
*Alu*1 highly reiterated sequence family, characterization, honeybee, 1195
-binding protein of *Drosophila*, *suppressor of Hairy-wing*, inactivation of enhancer, 1135
cell cycle arrest of *cdc* mutants, *RAD9* checkpoint, yeast, 63
damaging agents, mutation in *bimD* gene, *Aspergillus nidulans*, 1085
double-strand break-stimulated recombination, promotion by general recombination, phages λ and P22, 1013
escape from mitochondria to nucleus, nuclear mutations, yeast, 21
glucose repression, amylase gene expression, *Drosophila melanogaster*, 507
HeT-A-related repeats, *Y* chromosome, *Drosophila melanogaster*, 531
mapping of simple repeated sequences, heterochromatin, *Drosophila melanogaster*, 1149
marker-assisted mapping, genetics of reproductive isolation, *Drosophila simulans*, 261
mutational specificity, *lacI* mutation spectra, *Escherichia coli dnaE* antimutator alleles, 1031
plasmid-borne inverted repeat, instability of, yeast, 57
primary and secondary structure, deletion and duplication between direct repeats, *Escherichia coli*, 409
replication, increased fidelity, *Escherichia coli* mutants, 1023
sequence divergence, sexual isolation, *Bacillus subtilis*, 401
DNA, mitochondrial
male transmission of linear plasmids, *Neurospora*, 1055
replacement of, uniparental inheritance, *Neurospora*, 1063
DNA, ribosomal, molecular through ecological genetics, *abnormal abdomen*, *Drosophila mercatorum*, 475
DNA polymerase I, mitotic instability of tandem inverted repeats, mutations in *POL1*, yeast, 43
DNA polymerase III, α subunit of *Escherichia coli*, antimutator mutations, 1039
Drift
random, genetic variation, autotetraploid populations, 649
stepwise mutation model and computer simulation, VNTR allele frequency distributions, 983
Drosophila, 847, 959, 1289
Drosophila arizonae, 309
Drosophila buzzatii, 369
Drosophila eugracilis, 1145
Drosophila mauritiana, 251
Drosophila melanogaster, 221, 231, 243, 277, 293, 487, 507, 517, 531, 781, 789, 801, 809, 825, 837, 859, 869, 895, 1119, 1135, 1145, 1149, 1175
Drosophila mercatorum, 475
Drosophila miranda, 497
Drosophila pseudoobscura, 319
Drosophila rajasekari, 1145
Drosophila sechellia, 251
Drosophila simulans, 251, 261

Education, genetics in the classroom, 387
Element
Ac-induced instability, *Xanthophyllic* locus, tomato, 931
ARS, stimulation of meiotic recombination, yeast, 175
Endoplasmic reticulum, extragenic suppressors of mutations, cytoplasmic C terminus of *SEC63*, five genes in yeast, 159
Environment, natural, *abnormal abdomen*, *Drosophila mercatorum*, 475
Epistasis
evolution of multilocus systems, weak selection, 627

pleiotropic models of polygenic variation, stabilizing selection, 609
Escherichia coli, 409, 1023, 1031, 1039
Euchromatin, induction of position-effect variegation, *Drosophila melanogaster*, 231
Evolution
codon usage bias and base composition, nuclear genes, *Drosophila*, 847
genetic basis of Haldane's rule, nature of asymmetric hybrid male sterility, *Drosophila*, 251
inheritance of morphological differences, maize and teosinte, 559
molecular
compositional heterogeneity and patterns, genome, 837
substitution processes, haploid model, 971
multilocus systems under weak selection, 627
neo-Y chromosomal duplication, *Drosophila miranda*, 497
pattern of nucleotide substitutions, growth hormone-prolactin gene family, 1271
rates and patterns of base change, small subunit ribosomal RNA gene, 597
restoration of normal spermatogenesis, autosomal factor, *Drosophila mojavensis* males carrying *D. arizonae Y* chromosome, 309
VNTR allele frequency distributions, stepwise mutation model, computer simulation model, 983

Fecundity, molecular through ecological genetics, *abnormal abdomen*, *Drosophila mercatorum*, 475
Fertility, pericentric inversions, *Drosophila melanogaster*, 487
Flower, pigmentation, female fitness components, morning glory, 1237
Fluorescent *in situ* hybridization, mapping of chromosome rearrangement breakpoints, *Caenorhabditis elegans*, 211
Frameshifts, mutational specificity, *lacI* mutation spectra, *Escherichia coli dnaE* antimutator alleles, 1031
F statistics, selection, population size and inbreeding, *Drosophila buzzatii*, 369
Fungus, conidial, estimation of mitotic stability, 361

Galactose, suppression of *gal11* mutation, *SGE1*, yeast, 675
Gene
Abdominal-B, 3′ regulatory region, reiterated and interchangeable regulatory elements, 809
Adh and *P6*, molecular variation, African population of *Drosophila melanogaster*, 789
amylase, glucose repression, *Drosophila melanogaster*, 507
antennapedia complex, structural changes, *Drosophila pseudoobscura*, 319
autosomal and *Y*-linked, male germ line-specific transcripts, *Drosophila melanogaster*, 293
Axs, achiasmatic segregation, *Drosophila melanogaster*, 825
basis of Haldane's rule, nature of asymmetric hybrid male sterility, *Drosophila*, 251
bimD, DNA damaging agents, mutation of *Aspergillus nidulans*, 1085
B type surface protein, molecular and genetic analyses, *Paramecium tetraurelia*, 189
C4-CYP21, primigenial duplication, primates, 331
Chc, necessity, *Drosophila melanogaster*, 1119
conversion, stimulation of meiotic recombination in yeast, *ARS* element, 175
direct cloning from an ordered set of lambda clones, recombination, yeast, 151
dnaE
antimutator mutations, α subunit of *Escherichia coli* DNA polymerase III, 1039
mutants of *Escherichia coli*, fidelity of DNA replication, 1023
mutational specificity, *Escherichia coli*, 1031
euchromatic, induction of position-effect variegation, *Drosophila melanogaster*, 231
growth hormone-prolactin, pattern, nucleotide substitutions, 1271
increased dosage of unlinked locus, suppression of lethal trisomic phenotype, *Drosophila melanogaster*, 243
major effect, method of screening, 351
male-specific lethal-one, association with *X* chromosome in males, *Drosophila melanogaster*, 545
M and *F*, developmental analysis, *Musca domestica*, 1187
mei-1, transition from meiosis to mitosis, *Caenorhabditis elegans*, 199
NIT2, isolation by transposon tagging, *Chlamydomonas reinhardtii*, 737
Odysseus, genetics of reproductive isolation, *Drosophila simulans*, 261
polygene and genome, 999
RAD9 checkpoint, cell cycle arrest of *cdc* mutants, yeast, 63
SEC63, cytoplasmic C terminus, extragenic suppressors of mutations in yeast, 159
SGE1, suppression of *gal11* mutation, yeast, 675
small subunit ribosomal RNA, rates and patterns, base change, 597
snf, female-specific splicing pattern, *Sex-lethal*, 801
spe-17, genetic and molecular characterization, *Caenorhabditis elegans*, 769
suppressor of Hairy-wing DNA-binding protein, inactivation of enhancer, *Drosophila*, 1135
syrM and *nodD3*, regulation, *Rhizobium meliloti*, 435
TSF1 to *TSF6*, silencing of yeast *GAL* genes, 701
unc-22, sequence complexity and twitchin protein, *Caenorhabditis elegans*, 1097
unc-31, nervous system-controlled functions, *Caenorhabditis elegans*, 455
Genetics, in the classroom, 387
Genome, gene and polygene, 999

Germ cells, *Drosophila* species, pole cell transplantation, 1145
Glucose, repression, amylase gene expression, *Drosophila melanogaster*, 507
Growth hormone-prolactin gene family, pattern, nucleotide substitutions, 1271

Hairpins, mitotic instability of tandem inverted repeats, mutations in *POL1*, yeast, 43
Haldane's rule, nature of asymmetric hybrid male sterility, *Drosophila*, 251
Haploid model, substitution processes, molecular evolution, 971
Haplotypes, cladistic analysis of phenotypic associations, restriction endonuclease mapping, recombination, 659
Heterochromatin
  HeT-A-related repeats, *Y* chromosome, *Drosophila melanogaster*, 531
  mapping of simple repeated DNA sequences, *Drosophila melanogaster*, 1149
  role in expression, *rolled* locus, *Drosophila melanogaster*, 277
Heterosis, absence of, life span and life history traits, *Caenorhabditis elegans*, 465
Histones, male germ line-specific transcripts, autosomal and *Y*-linked genes, *Drosophila melanogaster*, 293
Hitchhiking, effect of deleterious mutations, neutral molecular variation, 1289
Honeybee, unusually conserved *Alu*I highly reiterated DNA sequence family, 1195
Housefly, developmental analysis, sex-determining genes *M* and *F*, 1187
Human, VNTR allele frequency distributions, stepwise mutation model, computer simulation approach, 983
Hybridization, *Drosophila* species, pole cell transplantation, 1145

Immunoglobulins, sequence complexity in muscle gene *unc-22*, twitchin protein, *Caenorhabditis elegans*, 1097
Inheritance
  uniparental
    male transmission of linear plasmids, *Neurospora*, 1055
    replacement of mitochondrial DNA, *Neurospora*, 1063
Inversions, pericentric, fertility effects, *Drosophila melanogaster*, 487
Ipomoea purpurea, 1237
Isochores, compositional heterogeneity and patterns, molecular evolution, *Drosophila* genome, 837
Isozymes, RFLPs and, comparative diversity analysis, barley, 909

Linkage, integrated map, host-bacteria interactions, common bean, 341
Linkage disequilibrium, molecular through ecological genetics, *abnormal abdomen*, *Drosophila mercatorum*, 475
Locus
  Darkener of apricot, *copia* and *copia*-induced mutations, *Drosophila melanogaster*, 1175
  floral pigmentation in morning glory, female fitness components, 1237
  HIS4, meiotic recombination hotspot, yeast, 5
  Lcp, *neo-Y* chromosomal duplication, *Drosophila miranda*, 497
  multilocus system, evolution of, weak selection, 627
  rolled, role of heterochromatin expression, *Drosophila melanogaster*, 277
  RpIII40, reverse genetics, *Drosophila* RNA polymerase II, 517
  two-locus model, maintenance of genetic variability, strong stabilizing selection, 371
  unlinked, suppression of lethal trisomic phenotype, *Drosophila melanogaster*, 243
  URA3, isogenic strain construction and gene mapping, *Candida albicans*, 717
  VNTR allele frequency distributions, stepwise mutation model, computer simulation approach, 983
  Xanthophyllic, *Ac*-induced instability, tomato, 931

Macronucleus, molecular and genetic analyses, B type surface protein gene, *Paramecium tetraurelia*, 189
Maize
  Bronze-1 locus, *dSpm* insertion mutations, 1211
  development of core RFLP map, immortalized F_2 population, 917
  element *Ds*, transposition pattern, *Arabidopsis thaliana*, 1221
  teosinte and, inheritance, morphological differences, 559
Major histocompatiblity complex, dating the primigenial *C4-CYP21* duplication, primates, 331
Mapping
  Candida albicans, isogenic strain construction, 717
  chromosome rearrangement breakpoints, fluorescent *in situ* hybridization, *Caenorhabditis elegans*, 211
  fine physical, *Phl*, polyploid wheat, 1231
  genetic linkage, sugarcane, 1249
  integrated linkage, host-bacteria interactions, common bean, 341
  physical, meiotic crossover events, *Neurospora crassa* linkage group I, 1077
  restriction endonuclease, cladistic analysis, phenotypic associations with haplotypes, 659
  saturated genetic, marker-QTL linkage, QTL gene effect, 943
  simple repeated DNA sequences, heterochromatin, *Drosophila melanogaster*, 1149
  six smallest chromosomes, resolution of 2.6 kilobase

pairs, yeast, 81
Mating-type
interconversion, directionality of fission yeast, 1045
positive and negative regulatory elements, yeast retrotransposon Ty*3*, 685
Maximum likelihood estimation, population parameters, 1261
Medicago sativa, regulation of *syrM* and *nodD3*, *Rhizobium meliloti*, 435
Meiosis
achiasmatic segregation, genetic analysis, *Drosophila melanogaster*, 825
chromosome pairing, two types of sites, *Caenorhabditis elegans*, 749
crossover events in 200-kb region, physical mapping, *Neurospora crassa* linkage group I, 1077
recombination hotspot at locus *HIS4*, yeast, 5
sister-chromatid association, *SID1-1* mutation, yeast, 423
stimulation of recombination by *ARS* element, yeast, 175
transition to mitosis, *mei-1* gene activity, *Caenorhabditis elegans*, 199
yeast, stage-specific effects, X-irradiation, 29
Microtubules, mutation in *bimD* gene, sensitivity to DNA damaging agents, *Aspergillus nidulans*, 1085
Mitochondria, escape of DNA to nucleus, nuclear mutations, yeast, 21
Mitosis
developmental analysis, sex-determining genes *M* and *F*, housefly, 1187
estimation of stability, conidial fungi, 361
instability of tandem inverted repeats, mutations in *POL1*, yeast, 43
mutation in *bimD* gene, sensitivity to DNA damaging agents, *Aspergillus nidulans*, 1085
recombination, mutagen-sensitive *nuv* mutants, *Aspergillus nidulans*, 445
transition from meiosis, *mei-1* gene activity, *Caenorhabditis elegans*, 199
Morgan, T. H., hypothesis, genetic control of development, 671
Morning glory, locus affecting floral pigmentation, female fitness components, 1237
Morphogenesis, cold-sensitive external scaffolding protein, second-site suppressors, bacteriophage ϕX174, 1003
Mouse
M and *F* genes, developmental analysis, 1187
models of human phenylketonuria, 1205
Muscle, *unc-22* gene, sequence complexity, *Caenorhabditis elegans*, 1097
Mustard gas, mutagenesis, discovery of, 393
Mutagen-sensitive *nuv* mutants, mitotic recombination, *Aspergillus nidulans*, 445
Mutagenesis
isogenic strain construction and gene mapping, *Candida albicans*, 717
mouse models of human phenylketonuria, 1205
mustard gas, discovery of, 393
Mutants
acatalasemic, characterization and rescue, *Drosophila melanogaster*, 781
Escherichia coli, increased fidelity of DNA replication, 1023
mutagen-sensitive *nuv*, mitotic recombination, *Aspergillus nidulans*, 445
Mutations
antimutator, α subunit of *Escherichia coli* DNA polymerase III, 1039
bimD gene, DNA damaging agents, *Aspergillus nidulans*, 1085
class of population genetic questions, generalized occupancy problem, 953
Darkener of apricot locus, *copia* and *copia*-induced mutations, *Drosophila melanogaster*, 1175
deleterious, neutral molecular variation, 1289
deletion and duplication between direct repeats, primary and secondary DNA structure, *Escherichia coli*, 409
extragenic suppressors, cytoplasmic C terminus of *SEC63*, yeast, 159
gal11, suppression by *SGE1* mutation, yeast, 675
lethal, cytogenetic analysis of chromosomal region 31, *Drosophila melanogaster*, 221
nuclear, escape of DNA from mitochondria to nucleus, yeast, 21
maximum likelihood estimation, population parameters, 1261
parallel processing of sensory information, *Caenorhabditis elegans*, 1105
POL1, mitotic instability of tandem inverted repeats, yeast, 43
sequence complexity in *unc-22* gene, *Caenorhabditis elegans*, 1097
SID1-1, meiotic sister-chromatid association, yeast, 423
specificity of *Escherichia coli dnaE* antimutator alleles, *lacI* mutation spectra, 1031
stepwise model and computer simulation, VNTR allele frequency distributions, 983

Neurons, nervous system-controlled functions, *Caenorhabditis elegans unc-31* gene, 455
Neurospora, 1055
Neurospora crassa, 729, 1077
Neurospora tetrasperma, 1063
Nitrate, regulatory gene *NIT2*, isolation by transposon tagging, *Chlamydomonas*, 737
Nucleotide, substitutions, growth hormone-prolactin gene family, 1271
Nucleus, escape of DNA from mitochondria, nuclear mutations, yeast, 21

Occupancy, class of population genetic questions, 953

Paramecium tetraurelia, molecular and genetic analyses, B type surface protein gene, 189
Phaseolus vulgaris, 341
Phenylketonuria, human, mouse models, 1205
Pheromone
  parallel processing of sensory information, *Caenorhabditis elegans*, 1105
  positive and negative regulatory elements, yeast retrotransposon Ty*3*, 685
Phylogenetic theory, rates and patterns of base change, small subunit ribosomal RNA gene, 597
Phylogeny, intraspecific reconstruction, empirical tests, predictions from coalescent theory, 959
Pigmentation, floral, female fitness components, morning glory, 1237
Plants, effect of deleterious mutations, neutral molecular variation, 1289
Plasmids
  -borne inverted repeat in yeast, instability of, 57
  linear, male transmission, mitochondrial DNA in *Neurospora*, 1055
Pleiotropic models, polygenic variation, stabilizing selection, epistasis, 609
Pole cell, transplantation, attempt to hybridize *Drosophila* species, 1145
Polygene, gene and genome, 999
Polymerase chain reaction, genetic linkage map, sugarcane, 1249
Polymorphism
  genetic linkage map, sugarcane, 1249
  molecular variation of *Adh* and *P6* genes, African population, *Drosophila melanogaster*, 789
  restriction fragment length
    comparative diversity analysis, barley, 909
    development of core map, maize, 917
    mapping of *Ph1*, polyploid wheat, 1231
    physical mapping of meiotic crossover events, *Neurospora crassa* linkage group I, 1077
Polyploidy
  genetic linkage map, sugarcane, 1249
  genetic variation and random drift, autotetraploid populations, 649
Population
  autotetraploid, genetic variation, random drift, 649
  comparative diversity analysis, RFLPs and isozymes, barley, 909
  detection of marker-QTL linkage, estimation of QTL gene effect, saturated genetic map, 943
  genetic questions, generalized occupancy problem, 953
  immortalized F_2, development, core RFLP map, 917
  parameters, maximum likelihood estimation, 1261
  size and inbreeding, *F* statistics, *Drosophila buzzatii*, 369
Position-effect variegation
  cytogenetic analysis of chromosomal region 31, *Drosophila melanogaster*, 231
  induction, euchromatic genes, *Drosophila melanogaster*, 231
Primates, dating the primigenial *C4-CYP21* duplication, 331
Prolactin-growth hormone gene family, pattern, nucleotide substitutions, 1271

Quantitative trait loci
  detection of chromosomal segments, multi-marker model, 1277
  detection of marker-QTL linkage and QTL gene effect, map location, saturated genetic map, 943
  inheritance of morphological differences, maize and teosinte, 559
  method of screening for genes of major effect, 351
  transgressive segregation, interspecific tomato cross, 585

Rearrangement
  chromosome, transformation, *Neurospora crassa*, 729
  interacting *hobo* transposons, inbred strain and interaction regulation, *Drosophila melanogaster*, 895
Recombination
  cladistic analysis of phenotypic associations, haplotypes, restriction endonuclease mapping, 659
  direct cloning of yeast genes, ordered set of lambda clones, 151
  directionality, fission yeast mating-type interconversion, 1045
  double-strand break-stimulated, promotion by general recombination, phages λ and P22, 1013
  evolution of multilocus systems, weak selection, 627
  maintenance of genetic variability, strong stabilizing selection, two-locus model, 371
  meiotic
    hotspot at *HIS4* locus, yeast, 5
    stimulation by *ARS* element, yeast, 175
  meiotic chromosome pairing, two types of sites, *Caenorhabditis elegans*, 749
  mitotic, mutagen-sensitive *nuv* mutants, *Aspergillus nidulans*, 445
  mitotic instability of tandem inverted repeats, mutations in *POL1*, yeast, 43
  stage-specific effects of X-irradiation, yeast meiosis, 29
Regulatory elements, positive and negative, yeast retrotransposon Ty*3*, 685
Repeats
  deletion and duplication, primary and secondary DNA structure, *Escherichia coli*, 409
  plasmid-borne inverted, instability of, yeast, 57
  tandem inverted, mitotic instability, mutations in *POL1* of yeast, 43
Reproduction, isolation, genetics of, *Drosophila simulans*, 261

Retrotransposon
copia, mutations at *Darkener of apricot* locus, *Drosophila melanogaster*, 1175
suppressor of Hairy-wing DNA-binding protein, inactivation of enhancer, *Drosophila*, 1135
TRIM, *neo-Y* chromosomal duplication, *Drosophila miranda*, 497
Ty*3*, positive and negative regulatory elements, yeast, 685
Reverse genetics, *Drosophila* RNA polymerase II, *RpII140* characterization, 517
Rhizobium meliloti, regulation of *syrM* and *nodD3*, 435
RNA, female-specific splicing pattern, *Sex-lethal*, *Drosophila* sex determination gene *snf*, 801
RNA, messenger, sequence complexity in *unc-22* gene, *Caenorhabditis elegans*, 1097
RNA, ribosomal, small subunit gene, rates and patterns, base change, 597
RNA polymerase II
reverse genetics, *Drosophila melanogaster*, 517
silencing of yeast *GAL* genes, *TSF1* to *TSF6*, 701
Robson, J. M., discovery of mustard gas mutagenesis, 393

Saccharomyces cerevisiae, 5, 21, 29, 43, 57, 63, 81, 151, 159, 175, 387, 423, 675, 685, 701
Saccharum spontaneum, 1249
Schizosaccharomyces pombe, 1045
Segregation
achiasmatic, genetic analysis, *Drosophila melanogaster*, 825
transgressive, QTL analysis, interspecific tomato cross, 585
Selection
natural, *abnormal abdomen*, *Drosophila mercatorum*, 475
phenotypic variance, 995
stabilizing
maintenance, genetic variability, 371
pleiotropic models of polygenic variation, epistasis, 609
weak, evolution, multilocus systems, 627
Sex determination
female-splicing pattern of *Sex-lethal*, *Drosophila* sex determination gene *snf*, 801
genes *M* and *F*, developmental analysis, housefly, 1187
Sexual isolation, effect of DNA sequence divergence, *Bacillus subtilis*, 401
Sister-chromatid exchange, meiotic, *SID1-1* mutation, yeast, 423
Speciation
genetic basis of Haldane's rule, nature of asymmetric hybrid male sterility, *Drosophila*, 251
restoration of normal spermatogenesis, autosomal factor, *Drosophila mojavensis* males carrying *D. arizonae Y* chromosome, 309
Spermatogenesis
clathrin heavy chain gene, *Drosophila melanogaster*, 1119
genetic and molecular characterization, defective gene *spe-17*, *Caenorhabditis elegans*, 769
male germ line-specific transcripts, autosomal and *Y*-linked genes, *Drosophila melanogaster*, 293
normal, restoration by autosomal factor, *Drosophila mojavensis* males carrying *D. arizonae Y* chromosome, 309
Sterility
asymmetric hybrid male, genetic basis of Haldane's rule, *Drosophila*, 251
attempt to hybridize *Drosophila* species, pole cell transplantation, 1145
genetics of reproductive isolation, *Drosophila simulans*, 261
restoration of normal spermatogenesis, autosomal factor, *Drosophila mojavensis* males carrying *D. arizonae Y* chromosome, 309
Sugarcane, genetic linkage, 1249
Suppressors
extragenic, mutations in cytoplasmic C terminus of *SEC63*, five genes in yeast, 159
second-site, cold-sensitive external scaffolding protein, bacteriophage ϕX174, 1003
Surface protein, B type, molecular and genetic analyses, *Paramecium tetraurelia*, 189
Symbiosis, regulation of *syrM* and *nodD3*, *Rhizobium meliloti*, 435

Telomeres, *HeT-A*-related repeats, *Y* chromosome, *Drosophila melanogaster*, 531
Teosinte, maize and, inheritance, morphological differences, 559
Tomato
interspecific cross, QTL analysis, transgressive segregation, 585
transgenic, genetically marked *Dissociation* element, linked and unlinked transposition, 571
Xanthophyllic locus, *Ac*-induced instability, 931
Transcription
positive and negative regulatory elements, yeast retrotransposon Ty*3*, 685
reverse genetics, *Drosophila* RNA polymerase II, 517
silencing of yeast *GAL* genes, *TSF1* to *TSF6*, 701
Transformation
effect of DNA sequence divergence, sexual isolation, *Bacillus subtilis*, 401
Neurospora crassa, chromosome rearrangements, 729
transposable element *mariner*, germline transformation, *Drosophila melanogaster*, 859
Transposable element
defective Suppressor-mutator, maize *Bronze-1* locus, 1211
Dissociation, linked and unlinked transposition, transgenic tomato, 571

HeT-A-related repeats, *Y* chromosome, *Drosophila melanogaster*, 531
mariner, mediation of germline transformation, *Drosophila melanogaster*, 859
Transposon
genetically marked *Dissociation* element, linked and unlinked transposition, transgenic tomato, 571
hobo, inbred strain and interaction regulation, *Drosophila melanogaster* hybrids, 895
sequence complexity in muscle gene *unc-22*, twitchin protein, *Caenorhabditis elegans*, 1097
suppressor of Hairy-wing DNA-binding protein, inactivation of enhancer, *Drosophila*, 1135
tagging, isolation, *Chlamydomonas* regulatory gene *NIT2*, 737
transposition pattern, maize element *Ds*, *Arabidopsis thaliana*, 1221
Twitchin protein, sequence complexity in *unc-22* gene, *Caenorhabditis elegans*, 1097

Variability, genetic, maintenance of, strong stabilizing selection, 371
Variance, phenotypic, effect of selection, 995
Vavilov, Nikolay Ivanovitch, memorial, 1

Wheat, polyploid, fine physical mapping of *Ph1*, 1231

Xanthomonas campestris, host-bacteria interactions, integrated linkage map, common bean, 341
X-irradiation, stage-specific effects, yeast meiosis, 29

Yeast
artificial chromosomes, compositional heterogeneity and patterns, evolution of *Drosophila* genome, 837
cell cycle arrest of *cdc* mutants, specificity of *RAD9* checkpoint, 63
direct cloning of genes, ordered set of lambda clones, recombination, 151
extragenic suppressors of mutations, cytoplasmic C terminus of *SEC63*, five genes, 159
fission, directionality, mating-type interconversion, 1045
genetics in the classroom, 387
meiosis, stage-specific effects, X-irradiation, 29
meiotic recombination hotspot, *HIS4* locus, 5
mutations in *POL1*, mitotic instability, tandem inverted repeats, 43
nuclear mutations, escape of DNA from mitochondria to nucleus, 21
physical maps of six smallest chromosomes, resolution of 2.6 kilobase pairs, 81
plasmid-borne inverted repeat, instability of, 57
retrotransposon Ty*3*, positive and negative regulatory elements, 685
SID1-1 mutation, meiotic sister-chromatid association, 423
silencing of *GAL* genes, *TSF1* to *TSF6*, 701
stimulation of meiotic recombination, *ARS* element, 175
suppression of *gal11* mutation, *SGE1*, 675

Zea mays, 559, 1211, 1221
